

## DHCP / DNS support for XMP-K32/K32SX/K12/CMM/TMC3500

Dear Sirs,

As of now the management software XMP-BABYLON provides DHCP / DNS functionality, which means that the IP addresses will be assigned automatically to our access controllers or standalone time & attendance terminals.

### The following devices will be supported:

- XMP-TMC3500
- XMP-K12
- XMP-K32SX
- XMP-K32
- XMP-CMM

The previous model XMP-K32L can be updated to XMP-K32SX by replacing the CPU module with the adapter module XMP-K32L-SX-MODUL. This procedure will enable the device to use the DHCP / DNS function.

For any further and detailed information, please contact our technical service team or download the documentation from our customer server.

# AUTECH - UPDATE

Article number	Functions
 XMP-NT-252	<b>DNS function for XMP-K12/K32SX/K32/CMM/TMC3500</b> <i>DHCP function already included in XMP-NT-000.</i>

Yours sincerely,

Your AUTECH - Team
